Understanding the SOAP Note Framework in Dermatology

Before exploring the sample, it's essential to understand the SOAP note structure—Subjective, Objective, Assessment, and Plan—and how it applies specifically to skin rashes.

Subjective (S): Capturing the Patient's Experience

This section records the patient's personal account of their skin issue. It includes:

- Chief Complaint: The primary reason for the visit, e.g., "red, itchy rash on arms."
- History of Present Illness (HPI): A detailed narrative describing onset, duration, progression, and associated symptoms.
- Past Medical History: Previous skin conditions, allergies, or relevant systemic illnesses.
- Medication History: Current or recent medications, including topical agents.
- Allergy History: Known sensitivities or allergies.
- Social and Environmental Factors: Exposure to new environments, recent travel, or contact with potential allergens.
- Review of Systems (if relevant): To identify systemic symptoms like fever or malaise.

Objective (O): Documenting Clinical Findings

This includes observable and measurable data:

- General Appearance: Patient's overall condition.
- Vital Signs: Temperature, blood pressure, pulse, respiratory rate.
- Inspection of the Skin: Detailed description of the rash.
- Palpation Findings: Texture, warmth, tenderness.
- Other Relevant Exams: Lymphadenopathy, systemic signs.

Assessment (A): Formulating a Differential Diagnosis

Here, the clinician synthesizes subjective and objective data to arrive at a probable diagnosis or list of differentials:

- Primary Diagnosis: The most likely cause of the rash.
- Differential Diagnoses: Other conditions that could present similarly.
- Diagnosis Rationale: Brief explanation supporting the diagnosis.

Plan (P): Outlining Next Steps

This encompasses:

- Management Strategies: Medications, topical or systemic.
